

DocuGenie™

Now process documents you only dreamed of doing before!

Form Processing Technology

Your wish is our command!

New Patent Pending Technology makes it easy to accurately obtain data from all types of forms and complex documents such as Medical EOB's, Statements Invoices, Payment Vouchers, Utility Bills and many others!

GenieTek™ Innovations Inc.'s breakthrough technology makes it now possible to handle complex documents that few others can make claim to. DocuGenie™ takes forms processing technology to places it has never gone before. Patent pending Formlet™ technology builds on existing and proven methods to create a new and exciting approach that delivers results in documents where traditional methods fail. New and patent pending validation techniques improve accuracy and significantly reduce user interventions. Developed for stand alone use or as a toolkit for developers.

DocuGenie™

Forms Processing Software that actually delivers results and handles complex documents with ease & accuracy!

DocuGenie™ is a major advance in Forms Processing Technology. Now seamlessly and accurately recognize data from all types of complex documents and computer generated structured printouts.

Formlets™ Deliver Results

DocuGenie™ uses Patent Pending Technology called Formlets™ to approach complex documents as a series of miniature templates. In simple terms Formlets™ goes beyond the conventional template structure and looks at each document as a series of 'mini' templates (or mini forms). While doing so, it automatically identifies and realizes accurate data and its related attributes from the layout and structure within.

Formlets™ is one of the core technologies that distinguishes us from most competitive software. DocuGenie™ surpasses and is far superior to both traditional template and keyword search technology.

Advanced Validation Technology Increases Accuracy and Minimizes User Intervention

PageVal™, CrossChekVal™ and FieldVal™ can operate in tandem to ensure accurate results and significantly reduce operator intervention. These tools virtually eliminate data errors on conventional documents as well as on complex or semi structured ones. Combined with Formlets™ technology these tools optimize results and reduce the cost associated with human involvement.

- **CrossChekVal™** - validates the accuracy between values in a table structure to ensure the totals match.
- **FieldVal™** - compares OCR results from multiple sources, factors in how important a data field is and presents only fields that need correcting.
- **PageVal™** - ensures that all other abnormal obstacles are identified and presented for operator intervention.

Scalability

DocuGenie™ is completely scalable. It can distribute work to many PC stations for scanning, recognition, verification and data export. Because it is a fully scalable system, it allows for growth with your business.

It can be as small as single station with one verification seat or can be expanded into a comprehensive network system with as many scanners, recognition stations, and as many verification operators as are required.

An Application and a Toolkit

As an application, DocuGenie™ is a comprehensive and easy to use out-of-the box document processing system that includes the foremost innovative forms processing and data recognition technology. DocuGenie™ integrates with your choice of OCR and ICR engines. As an application you still have the flexibility of advanced scripting and of developing custom tools such as custom validations.

As a Toolkit, DocuGenie's™ open architecture allows for integration of its core code with other software. The use of ActiveX controls allows for easy and quick integration with the ultimate in performance. Scripting functions are built in standard features for both versions. Both versions also come with a complete workflow/task management system. From simple to complex, DocuGenie™ can accommodate a wide array of needs.
